# Introduction

This is the result of an effort to document existing opportunities for individuals to enter the computer science field in the state of Massachusetts. The source of analysis was based on both a thorough review of occupational profiles and an analysis of the skills needed to satisfy the requirements. The analysis resulted in five areas of job opportunity.

Networking and Systems is one of the five areas identified as viable roles that offer the greatest opportunities in computer science for those individuals with less than a 4-year degree. This report identifies the opportunities available in the computer science field as they pertain to Networking and Systems. The report identifies the skills and certifications necessary for each career opportunity identified, and maps the potential career pathways that can be realized, and any additional skills or training required for promotion.

Students interested in preparing for the Networking and Systems role, can learn and develop the requisite skills and can also earn relevant certifications. In the sections that follow, the report identifies the top skills and most relevant certifications. It also indicates the projected employment growth of the alternative career paths suitable for the role as well as estimated salary advancement over 2, 5 and more than 6 years in the role.

## Job Opportunities in Computer Science for individuals with less than a 4-year degree

- Computer Support
- Cybersecurity
- Data Administration
- Networking and Systems
- Programming and Development

## Skill Analysis

Skill analysis is done to show the extent of mastery or expertise needed to match the requirements of a job at three levels: necessary, defining, and distinguishing. Necessary skills are the set of technical abilities needed to do the particular job or something similar. Defining skills represent the sets of tasks that define and are particular to the job. Distinguishing skills are the areas of mastery or expertise that allow an individual to excel at a job. These are specialized skills called upon sporadically.

## Occupation Profiles

The study of occupation profiles is designed to document the job opportunities for the Networking and Systems role. This role has four starting occupations: Network or Systems Support Specialist, Network or Systems Administrator, Network Engineer or Architect, and Systems Analyst. For each career path emerging from the Network or Systems Support Specialist, Network or Systems Administrator, Network Engineer or Architect, and Systems Analyst occupations, the report presents salary and career advancement estimates, job openings and projected growth. The report also presents top skills and certifications associated with the occupation.

## Career Pathways

Career advancement is generally seen as a transition that brings higher compensation and/or responsibility in a role that is similar to that previously held.

In order to understand likely career pathways for each of the four starting occupations of the networking and systems role, likely advancement occupations were examined. This was done following Emsi | Burning Glass' Career Pathways model as well as by examining actual transitions made by individuals through analysis of Emsi | Burning Glass's resume database.

Each set of origin and destina-

tion occupations comes with a predicted salary differential and skill gap between the two occupations.

## Methodology

In this analysis, we use an index of similarity or 'similarity scores'. The similarity scores for each pair of occupations have a numeric value between 0 and 1. They can be seen as a proxy measure for the feasibility of transitioning between the two jobs. Job pairs that have a similarity score of 1 can be said to have a perfect fit (and are in fact the same occupation), while job pairs with a similarity score of 0 have the most imperfect fit with no overlapping skills.

Similarity scores only indicate skills overlap and skills gaps, and do not contemplate differentials in educational attainment. While some occupations always require specific degrees or licenses, many occupations may only prefer certain education levels (however strongly) and can offer greater possibility for direct promotion.

---

## Occupation Profile: Networking and Systems

Occupation:  
Network /  
Systems  
Support  
Specialist

# Occupation Profile: Networking and Systems

## Occupation: Network / Systems Support Specialist

### Occupation

Network / systems support specialists analyze, troubleshoot, and evaluate computer network problems. They provide help and advice to computer users and organizations. These specialists either support computer networks or they provide technical assistance directly to computer users. They play an important role in maintaining an organization's network and keeping them safe and secure through both hardware configuration and end-user training. These individuals require expertise in diagnostic and security software as well as in-depth knowledge of networking equipment and infrastructure devices. They are comfortable in problem solving, customer service and prioritizing.

### Growth

Network / systems support specialist jobs are projected to have a 0.96% growth in employment. The entry level salary for this occupation is \$56,802 with a requirement of less than 2 years of experience. The mid career salary, that is jobs requiring 3 to 5 years of experience is \$70,292. The advanced career salary which requests six or more years of experience is \$90,012.

### Skills

The skills shown in the table below rep-

represent the additional skills likely needed to move from the starting occupation to the advancement occupation. Necessary skills are specialized skills required for this job and relevant across other similar jobs. The necessary skills include knowledge of project management, Linux, information systems, scheduling, hardware troubleshooting, and customer contact. Defining skills represent the day-to-day tasks and responsibilities of the job. They assume an increase level of technical competency. They include knowledge of customer service, technical support, network support, network administration, repair, and Cisco. Distinguishing skills set a worker apart and come with a salary premium. Note that in this role, the prospects for growth include knowledge of system administration, Local Area Networks (LAN), IT support, Break/Fix, Open Shortest Path First (OSPF), and Network Management Center (NMC).

### Certifications

- Security Clearance
- Driver's License
- Cisco Certified Network Associate (CCNA)

tion: Cisco Certified Network Associate (CCNA), an associate-level Cisco Career certification from Cisco Systems.

### Certifications

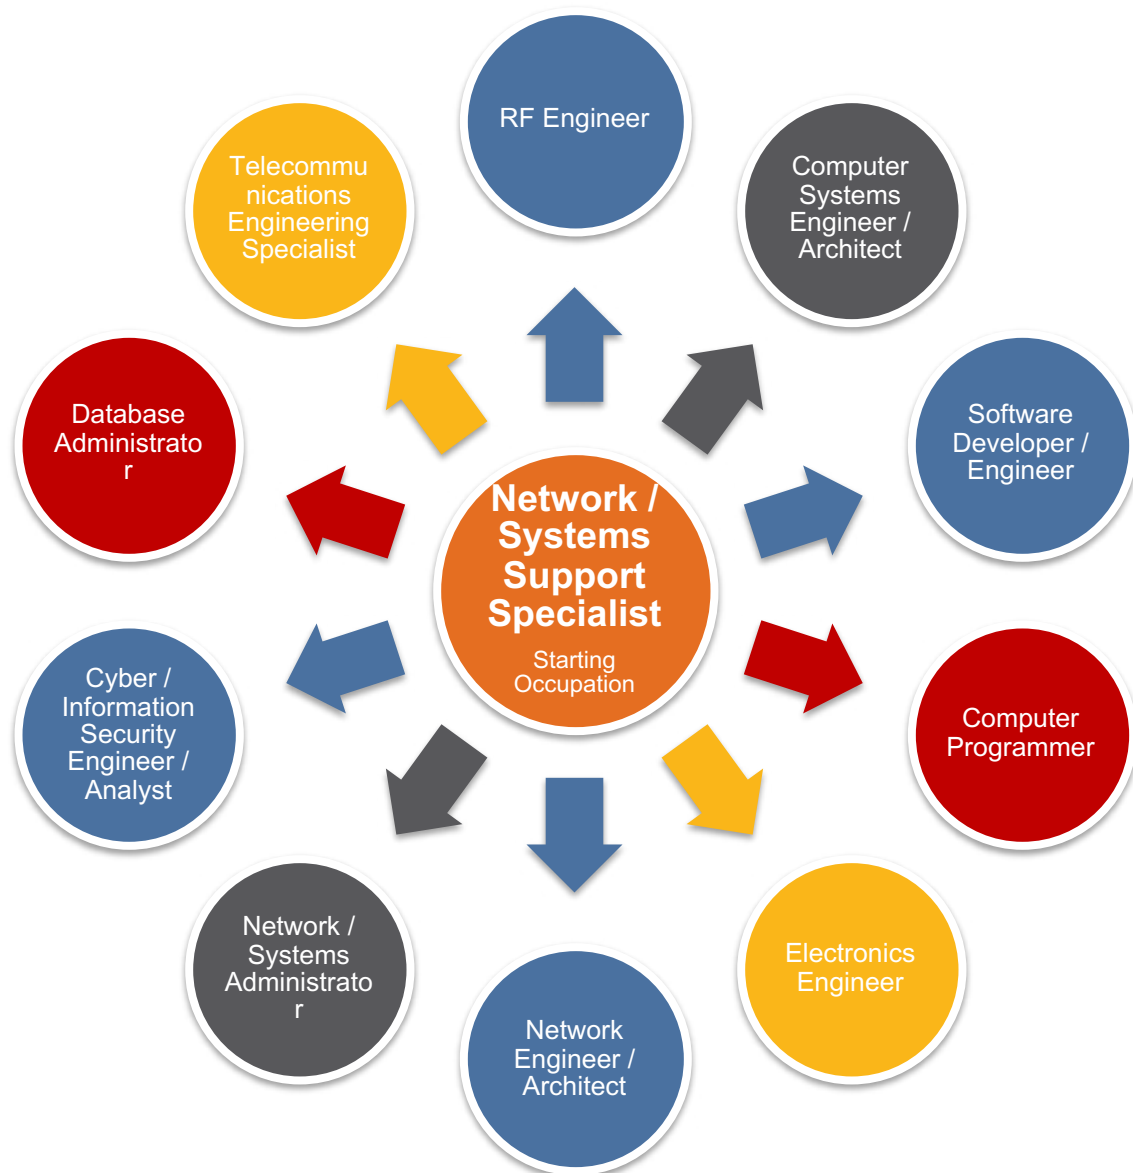

This occupation requests in addition to security clearance and a driver's license, the following certifica-

Customer Contact	9%	Cisco	14%	Network Management Center (NMC)	3%

# Potential Career Paths for Network / Systems Support Specialist

For the starting occupation of network / systems support specialist, we identify possible next step occupations. These occupations come with an increase in compensation and require additional skills and in some cases certifications. These skills may be learned on the job at the initial position held or can be learned in advance.

In the pages that follow, we provide for each Advancement Occupation, skill gaps, certifications, salary and workforce information. With this information, students, educators, and policymakers can see the paths a worker could take from the Starting Occupation to the Advancement Occupation.

Detailed  
Career Pathways:

Network / Systems  
Support Specialist

## Network /Systems Support Specialist

*Starting Occupation*

## RF Engineer

*Advancement Occupation*

### Advancement Occupation

RF Engineers are professional experts known within the electrical engineering arena of IT and Telecommunication sectors. They design, deploy and optimize wireless communication systems. These electrical engineer specialists mainly work for cellular operators where they create network performance models, test the efficiency of existing networks, and ensure that regulatory standards are met. Radio frequency engineers work with equipment that send or receive radio waves, with wireless devices, radios, and mobile phones. Important duties of these individuals are to enhance the performance of wireless networks and to plan or assist in the planning of RF strategies for making new wireless networks.

### Growth

The similarity score between RF engineer and the starting occupation is 0.41 and the average salary differential is \$31,685. While the projected 5-year employment growth for Network / Systems support specialist is 0.96%, RF engineer's projected 5-year growth is lower at 0.28%. Average salary for the advancement occupation is \$56,802 for individuals with up to 2 years of experience; \$70,292 for those with 3 to 5 years, and \$90,012 for individuals with 6 or more years. There were 275

### Skills

The skills in the following table represent the additional skills likely needed to move from network/systems support specialist to RF engineer. The skill taxonomy used in this analysis classifies skills for a given occupation as necessary, defining or distinguishing. Necessary skills are specialized skills required for this job and relevant across other similar jobs. The necessary skills for RF engineer are MATLAB, test equipment, systems engineering, physics, and budgeting. Defining skills represent the day-to-day tasks and responsibilities of the job. For this occupation the defining skills include Radio Frequency (RF) engineering, Radio Frequency (RF) design, simulation, oscilloscopes, and Digital Signal Processing (DSP). Distinguishing skills set a worker apart and come with a salary or growth premium. For this occupation, the distinguishing skills are knowledge of Mapinfo, Code Division Multiple Access (CDMA), Spectrum Analyzer, signal generators, and radio frequencies.

### Certifications

The network / systems support specialist occupation requests in addition to security clearance and a driver's license, the following certification: Cisco Certified Network Associate (CCNA), an associate-level Cisco

# Network /Systems Support Specialist

## Network /Systems Support Specialist

*Starting Occupation*

## Computer Systems Engineer / Architect

*Advancement Occupation*

### Advancement Occupation

Computer systems engineers or architects design and develop solutions to complex applications problems, system administration issues, or network concerns. They perform systems management and integration functions. These individuals develop software engineering, system integration, or distributed system architectures. They also collaborate with software developers to select appropriate design solutions and to ensure the compatibility of system components. These individuals are comfortable with paying attention to detail, using analytical skills and working in an atmosphere of innovation.

### Growth

The similarity score between computer systems engineers or architects and the starting occupation is 0.38 and the average salary differential is \$42,427. While the projected 5-year employment growth for network or systems support specialist is 0.96%, computer systems engineer or architect's projected 5-year growth is higher at 2.75%. Average salary for the computer systems engineer or architect occupation is \$60,813 for individuals with up to 2 years of experience; \$83,001 for those with 3 to 5 years, and \$99,718 for individuals with 6 or more years. There were 3,259 postings for the advancement occupation.

### Skills

The skills in the following table represent the additional skills likely needed to move from network or systems support specialist to computer systems engineer or architect. The skill taxonomy used in this analysis classifies skills for a given occupation as necessary, defining or distinguishing. Necessary skills are specialized skills required for this job and relevant across other similar jobs. The necessary skills for computer systems engineer or architect are knowledge of Python, software development, SQL, project management, and software engineering. Defining skills represent the day-to-day tasks and responsibilities of the job. For this occupation the defining skills include knowledge of Systems engineering, Linux, Java, DevOps, and System Architecture. Distinguishing skills set a worker apart and come with a salary or growth premium. For this occupation, the distinguishing skills are knowledge of UNIX, Windows server, Continuous Integration (CI), firmware, and hardware and software configuration.

### Certifications

- Driver's License
- Cisco Certified Network Associate (CCNA)

The Advancement occupation commonly requests the following certifications:

- Security clearance
- CompTIA Security+
- Certified Information Systems Security Professional (CISSP)

## Network /Systems Support Specialist

*Starting Occupation*

## Software Developer / Engineer

*Advancement Occupation*

### Advancement Occupation

Software developers/ engineers design, and build computer programs. They identify user needs, develop the programs, test out new software, and make improvements. Some develop new applications for mobile or desktop use, while others build underlying systems software such as operating systems. They design each piece of an application or system and plan how the pieces will work together. Software developers / engineers create a variety of models and diagrams showing programmers the software code needed for an application. Working closely with computer programmers, software developers fill crucial roles not only in the computer systems industry, but also in manufacturing, finance, health services and software publishing industries. These individuals are comfortable with the uncertainties surrounding innovation and creativity. They have an ability to focus and concentrate for prolonged time periods addressing numerous and interlocking pieces. Finally, software developers / engineers are problem solvers, as they are responsible for solving the problems that occur during the development process.

### Growth

salary or growth premium. For this occupation, the distinguishing skills are knowledge of JavaScript Object Notation (JSON), jQuery, React Javascript, Spring Boot, and Ruby.

## Certifications

The network / systems support specialist occupation requests in addition to security clearance and a driver's license, the following certification: Cisco Certified Network Associate (CCNA), an associate-level Cisco Career certification from Cisco Systems.

The software developer/ engineer occupation commonly requests security clearance, and among others, the following certifications: IT Infrastructure Library (ITIL) Certification. Entry-level certification for IT service management. The second certification is CompTIA Security+, a globally trusted, vendor-neutral certification that validates the baseline skills necessary to perform core security functions and pursue an IT security career.

## Certifications

The source occupation commonly requests the following certifications:

- Security Clearance
- Driver's License
- Cisco Certified Network Associate (CCNA)

The Advancement occupation commonly requests the following certifications:

- Security Clearance
- IT Infrastructure Library (ITIL) Certification
- CompTIA Security+

## Network /Systems Support Specialist

*Starting Occupation*

## Computer Programmer

*Advancement Occupation*

### Advancement Occupation

Computer programmers write and test code that allows computer applications and software programs to function properly. They turn the program designs created by analysts, software developers and engineers into instructions that a computer can follow. Computer programmers also design a graphical user interface (GUI) for an application so that non-technical users can use the software through easy, point-and-click menu options. These individuals tend to be investigative, which means they're intellectual, introspective, and inquisitive. They are curious, methodical, rational, analytical, and logical.

### Growth

The similarity score between computer programmer and the starting occupation is 0.336 and the average salary differential is \$15,667. While the projected 5-year employment growth for network or systems support specialist is 0.96%, computer programmer's projected 5-year growth is lower at -3.93%. Average salary for the computer programmer occupation is \$46,889 for individuals with up to 2 years of experience; \$57,102 for those with 3 to 5 years, and \$71,592 for individuals with 6 or more years. There were 892 postings for the advancement occupation.

### Skills

The skills in the following table represent the additional skills likely needed to move from network or systems support specialist to computer programmer. The skill taxonomy used in this analysis classifies skills for a given occupation as necessary, defining or distinguishing. Necessary skills are specialized skills required for this job and relevant across other similar jobs. The necessary skills for computer programmer are knowledge of software development, Microsoft C#, project management, Oracle, and customer service. Defining skills represent the day-to-day tasks and responsibilities of the job. For this occupation the defining skills include knowledge of SQL, Java, JavaScript, .NET, and Python. Distinguishing skills set a worker apart and come with a salary or growth premium. For this occupation, the distinguishing skills are knowledge of SQL Server, Extensible Markup Language (XML), unit testing, debugging, and C++.

### Certifications

The network / systems support specialist occupation requests in addition to security clearance and a driver's license, the following certification: Cisco Certified Network Associate (CCNA), an associate-level Cisco Career certification from Cisco Systems.

# Network /Systems Support Specialist

The computer programmer occupation commonly requests security clearance, driver's license and the following certification: Project Management Professional (PMP) certification. This certification validates the individual's competence to perform in the role of a project manager, leading and directing projects and teams.

## Certifications

The source occupation commonly requests the following certifications:

- Security Clearance
- Driver's License
- Cisco Certified Network Associate (CCNA)

The Advancement occupation commonly requests the following certifications:

- Security Clearance
- Driver's License
- Project Management Professional (PMP)

## Network /Systems Support Specialist

*Starting Occupation*

## Electronics Engineer

*Advancement Occupation*

### Advancement Occupation

Electronics engineers design, develop, test, and supervise the manufacture of electronic equipment such as broadcast and communications systems. Many electronics engineers also work in areas closely related to computers. However, engineers whose work is related exclusively to computer hardware are considered computer hardware engineers. Electronics engineers specialize in areas such as communications, signal processing, and control systems or have a specialty within one of these areas. Basically, an electronics engineer is an engineer with expertise in circuits and devices and the systems and equipment that use them. These individuals are typically thinkers and builders who like working with ideas and prefer a job that demands lots of thinking. They enjoy searching for knowledge, implementing practical solutions and working with machinery.

### Growth

The similarity score between electronics engineer and the starting occupation is 0.326 and the average salary differential is \$20,852. While the projected 5-year employment growth for network or systems support specialist is 0.96%, electronics engineer's projected 5-year growth is somewhat similar at 0.47%.

## Certifications

The network / systems support specialist occupation requests in addition to security clearance and a driver's license, the following certification: Cisco Certified Network Associate (CCNA), an associate-level Cisco Career certification from Cisco Systems.

The electronics engineer occupation commonly requests the following certifications. Security clearance, Driver's license, and among others, to have certification from an American Board for Engineering and Technology (ABET) accredited program.

## Certifications

The source occupation commonly requests the following certifications:

- Security Clearance
- Driver's License
- Cisco Certified Network Associate (CCNA)

The Advancement occupation commonly requests the following certifications:

- Security Clearance
- Driver's License
- American Board for Engineering and Technology (ABET) Accredited

## Network /Systems Support Specialist

*Starting Occupation*

## Network / Systems Administrator

*Advancement Occupation*

### Advancement Occupation

Network or systems administrators are responsible for the day-to-day operation of computer networks. They organize, install, and support an organization's computer systems, including local area networks (LANs), wide area networks (WANs), network segments, intranets, and other data communication systems. Central to their role is the responsibility for maintaining the a functioning network at all times. Since organizations depend on their networks for so much of their work, problems must be corrected quickly. In addition, these individuals make updates to all equipment and software to maintain them current. These individuals are comfortable collaborating with teams, acting as both a team player and a leader, interacting effectively with multiple levels of the organization, and communicating with colleagues.

### Growth

The similarity score between network or systems administrator and the starting occupation is 0.711 and the average salary differential is \$16,017. While the projected 5-year employment growth for network or systems support specialist is 0.96%, network or systems administrator's projected 5-year growth is considerably lower at -0.60%. ## Network /Systems Support Specialist

*Starting Occupation*

## Database Administrator

*Advancement Occupation*

### Advancement Occupation

Database administrators set up databases according to a company's needs and make sure they operate efficiently. They also fine-tune, upgrade and test modifications to the databases as needed. For example, they create or organize systems to store and secure a variety of data, such as financial information and customer shipping records. Individuals in this occupation are comfortable resolving complex issues, so attention to detail is an essential trait in this profession, as is a passion for problem-solving. Communication skills are also important since database administrators often work as part of a team with computer programmers and managers. Ongoing maintenance of a database requires being on call.

### Growth

The similarity score between database administrator and the starting occupation is 0.434 and the average salary differential is \$21,397. While the projected 5-year employment growth for network or systems support specialist is 0.96%, the advancement occupation's projected 5-year growth is lower at 0.17%. Average salary for the advancement occupation is \$65,432 for individuals with up to 2 years of experience; \$78,590 for those with 3 to 5 years, and \$97,463 for individu-

## Network /Systems Support Specialist

*Starting Occupation*

## Telecommunications Engineering Specialist

*Advancement Occupation*

### Advancement Occupation

Telecommunications engineering specialists design or configure voice, video, and data communications systems to keep users connected. They supervise installation, and post-installation service and maintenance. They also implement controls to provide security for operating systems, software, and data. These individuals are comfortable with starting up and carrying out projects. They like leading people and making many decisions. Sometimes they require risk taking and often deal with business by providing user support through diagnosing network and device problems and implementing technical or procedural solutions.

### Growth

The similarity score between telecommunications engineering specialist and the starting occupation is 0.673 and the average salary differential is \$8,908. While the projected 5-year employment growth for network or systems support specialist is 0.96%, telecommunications engineering specialist's projected 5-year growth is slightly higher at 2.00%. Average salary for the telecommunications engineering specialist occupation is \$46,889 for individuals with up to 2 years of experience; \$57,102 for those with 3 to 5 years, and \$71,592 for individ-

## Potential Career Paths for Network / Systems Administrator

For the starting occupation of network or systems administrator, we identify possible next step occupations. These occupations come with an increase in compensation and require additional skills and in some cases certifications. These skills may be learned on the job at the initial position held or can be learned in advance.

In the pages that follow, we provide for each Advancement Occupation, skill gaps, certifi-

cations, salary and workforce information. With this information, students, educators, and policymakers can see the paths a worker could take from the Starting Occupation to the Advancement Occupation.

Detailed  
Career Pathways:

Network / Systems  
Administrator

## Network / Systems Administrator

*Starting Occupation*

## Computer Systems Engineer / Architect

- CompTIA Security+
- Certified Information Systems Security Professional (CISSP)

sign, engineer, implement, and run an information security program.

## Network / Systems Administrator

*Starting Occupation*

## Software Developer / Engineer

*Advancement Occupation*

### Advancement Occupation

Software developers/ engineers design, and build computer programs. They identify user needs, develop the programs, test out new software, and make improvements. Some develop new applications for mobile or desktop use, while others build underlying systems software such as operating systems. They design each piece of an application or system and plan how the pieces will work together. Software developers / engineers create a variety of models and diagrams showing programmers the software code needed for an application. Working closely with computer programmers, software developers fill crucial roles not only in the computer systems industry, but also in manufacturing, finance, health services and software publishing industries. These individuals are comfortable with the uncertainties surrounding innovation and creativity. They have an ability to focus and concentrate for prolonged time periods addressing numerous and interlocking pieces. Finally, software developers / engineers are problem solvers, as they are responsible for solving the problems that occur during the development process.

### Growth

The similarity score between software developer or engineer and the starting occupation is 0.567 and the average salary

necessary to perform core security functions and pursue an IT security career.

## Network / Systems Administrator

*Starting Occupation*

## Cyber / Information Security Engineer / Analyst

*Advancement Occupation*

### Advancement Occupation

Cyber/ Information security engineers/ analysts specialize in network and IT infrastructure security. They understand cyberattacks, malware, and the behavior of cybercriminals, and actively seeks to anticipate and prevent these attacks. Their primary role is to understand company IT infrastructure in detail, monitor it at all times, and evaluate threats that could potentially breach the network, and the access to information assets. They continuously look for ways to enhance company information systems and network security and protect its sensitive information. These individuals are comfortable staying up-to-date with the changing technology world, and are very detailed oriented.

### Growth

The similarity score between cyber/ Information security engineer/ analyst and the starting occupation is 0.535 and the average salary differential is \$14,540. While the projected 5-year employment growth for network or systems administrator is -0.60%, cyber/ Information security engineer/ analyst's projected 5-year growth is considerably higher at 8.77%. Average salary for the cyber/ Information security engineer/ analyst occupation is \$58,383 for individuals with up to 2 years

stitute. GIAC provides a set of vendor-neutral computer security certifications.

## Network / Systems Administrator

*Starting Occupation*

## Database Architect

*Advancement Occupation*

### Advancement Occupation

Database architects design strategies for company-wide large databases, data warehouse systems, and multidimensional networks. They set standards for database operations, programming, query processes, and security. Database architects model, design, and construct large relational databases or data warehouses. Create and optimize data models for warehouse infrastructure and workflow. They also integrate new systems with existing warehouse structure and refine system performance and functionality. These individuals are comfortable structuring complex problems through deductive reasoning, and can communicate their recommendations in simple business-like language. But most of all, they expose significant oral and reading comprehension.

### Growth

The similarity score between database architect and the starting occupation is 0.515 and the average salary differential is \$21,316. While the projected 5-year employment growth for network or systems administrator is -0.60%, database architect's projected 5-year growth is higher at 2.99%. Average salary for the database architect occupation is \$69,185 for individuals with up to 2 years of experience; \$85,231 for those with 3 to 5 years, and \$98,672 for individuals

## Network / Systems Administrator

*Starting Occupation*

## Business Intelligence Architect / Developer

*Advancement Occupation*

### Advancement Occupation

Business intelligence architects/ developers are responsible for designing and developing BI solutions, overseeing the implementation of these types of systems and also their ongoing maintenance. They are in charge of developing, deploying, and maintaining BI interfaces. Those include query tools, data visualization and interactive dashboards, ad hoc reporting, and data modeling tools. These individuals are comfortable working with large amounts of data and deriving insights from their analysis. Some individuals may be more comfortable presenting and communicating results to others. But in either case, they are good at examining multiple sources of data and then making accurate conclusions about them. These individuals are naturally inquisitive and over time, develop a great deal of forward-thinking vision.

### Growth

The similarity score between business intelligence architect / developer and the starting occupation is 0.479 and the average salary differential is \$26,628. While the projected 5-year employment growth for network or systems administrator is -0.60%, business intelligence architect / developer's projected 5-year growth is considerably higher at 6.30%.

## Network / Systems Administrator

*Starting Occupation*

## Web Developer

*Advancement Occupation*

### Advancement Occupation

Web developers create and maintain websites. They are also responsible for the site's technical aspects, such as its performance and capacity, which are measures of a website's speed and how much traffic the site can handle. In addition, web developers may create content for the site. They evaluate code to ensure that it is properly structured, meets industry standards, and is compatible with browsers and devices. These developers optimize website performance, scalability, and server-side code and processes. They may develop website infrastructure and integrate websites with other computer applications. These individuals are comfortable working with technology as the core of their responsibilities, but overtime, must develop a good understanding of consumer behavior, as well as collaboration skills and project management.

### Growth

The similarity score between web developer and the starting occupation is 0.449 and the average salary differential is \$19,733. While the projected 5-year employment growth for database administrator is -0.60%, web developer's projected 5-year growth is higher at 2.18%. ## Network / Systems Administrator

*Starting Occupation*

## Data Engineer

*Advancement Occupation*

### Advancement Occupation

Data engineers are responsible for finding trends in data sets and developing algorithms to help make raw data more useful. This role requires a significant set of technical skills, but data engineers also need communication skills to work across departments to understand what organization leaders want to gain from existing large datasets. These individuals are comfortable with the use of mathematical or statistical skills to develop, test or validate models from available datasets. But they also have the ability to convey the results of their data analysis in visual or summary form. Most importantly, data engineers are skilled database programmers who can develop efficient data pipelines, that is, services or actions to process heterogeneous data in several useful steps.

### Growth

The similarity score between data engineer and the starting occupation is 0.362 and the average salary differential is \$33,677. While the projected 5-year employment growth for network or system administrator is -0.60%, data engineer's projected 5-year growth is higher at 2.56%. Average salary for the data engineer occupation is \$80,464 for individuals with up to 2 years of experience; \$97,186 for those with

based training and certifications. However, MCSA holders will be allowed to keep it.

## Network / Systems Administrator

*Starting Occupation*

## IT Project Manager

*Advancement Occupation*

### Advancement Occupation

IT project managers are individuals charged with overseeing the process of planning, executing and delegating responsibilities around an organization's information technology (IT) pursuits and goals. Specifically, they help determine the systems and technology needed for specific IT projects; create detailed schedules; build a budget; identify staffing needs; and hire and manage the project staff. These individuals are comfortable in both, the technical as well as the organizational environment of the project, making them very effective as liaison between business and technical aspects of projects. They are good communicators and over time, develop an effective sense for negotiation.

### Growth

The similarity score between IT project manager and the starting occupation is 0.413 and the average salary differential is \$14,533. While the projected 5-year employment growth for network or systems administrator is -0.60%, IT project manager's projected 5-year growth is considerably higher at 3.12%. Average salary for the IT project manager occupation is \$70,136 for individuals with upto 2 years of experience; \$84,972 for those with 3 to 5 years, and \$98,182 for individuals

The skill taxonomy used in this analysis classifies skills for a given occupation as necessary, defining or distinguishing. Necessary skills are specialized skills required for this job and relevant across other similar jobs. The necessary skills for IT project manager are knowledge of scheduling, project planning and development skills, customer service, SQL, and quality assurance and control. Defining skills represent the day-to-day tasks and responsibilities of the job. For this occupation the defining skills include knowledge of project management, budgeting, Scrum, software development, and Scrum Master. Distinguishing skills set a worker apart and come with a salary or growth premium. For this occupation, the distinguishing skills are product owner, IT management, DevOps, business analysis, and agile coaching.

### Certifications

The network or systems administrator occupation commonly requests in addition to security clearance, the follow-

*Starting Occupation*

## Mobile Applications Developer

*Advancement Occupation*

### Advancement Occupation

A mobile applications developer is a software engineer who works primarily with mobile devices, creating, programming, testing, and maintaining apps and mobile platforms across devices like smartphones, tablets and laptops. Mobile developers write programs inside of a mobile development environment using a specific programming language such as Objective C or Java. A mobile app developer will typically develop an app for a specific operating system, such as Google Android or Apple iOS, and apply the programming languages and software development environment for that platform. These individuals are usually curious, imaginative, and value variety. They are methodical, reliable and generally plan things in advance. These individuals are comfortable with the fast pace of change in the underlying development technologies.

### Growth

The similarity score between mobile applications developer and the starting occupation is 0.357 and the average salary differential is \$28,314. While the projected 5-year employment growth for network or systems administrator is -0.60%, mobile applications developer's projected 5-year growth is considerably higher at 5.63%. Average salary for the mobile applications developer occupation is \$70,826

# Potential Career Paths for Network Engineer / Architect

For the starting occupation of network engineer/ architect, we identify possible next step occupations. These occupations come with an increase in compensation and require additional skills and in some cases certifications. These skills may be learned on the job at the initial position held or can be learned in advance.

In the pages that follow, we provide for each Advancement Occupation, skill gaps, certifi-

cations, salary and workforce information. With this information, students, educators, and policymakers can see the paths a worker could take from the Starting Occupation to the Advancement Occupation.

## Detailed Career Pathways:

### Network Engineer/ Architect

# Network Engineer / Architect

*Starting Occupation*

# Data Engineer

*Advancement Occupation*

## Advancement Occupation

Data engineers are responsible for finding trends in data sets and developing algorithms to help make raw data more useful. This role requires a significant set of technical skills, but data engineers also need communication skills to work across departments to understand what organization leaders want to gain from existing large datasets. These individuals are comfortable with the use of mathematical or statistical skills to develop, test or validate models from available datasets. But they also have the ability to convey the results of their data analysis in visual or summary form. Most importantly, data engineers are skilled database programmers who can develop efficient data pipelines, that is, services or actions to process heterogeneous data in several useful steps.

## Growth

The similarity score between data engineer and the starting occupation is 0.462 and the average salary differential is \$10,946. While the projected 5-year employment growth for network engineer or architect is 2.86%, data engineer's projected 5-year growth is slightly lower at 2.56%. Average salary for the data engineer occupation is \$80,464 for individuals with

## Occupation: Systems Analyst

### Occupation

Systems analysts implement, maintain, and support IT and information systems to meet the business needs of organizations. They analyze and create tests, and develop specifications for developers and programmers to follow. One of the most important duties of systems analysts is collecting and analyzing the requirements for a new system. These individuals are normally responsible for generating documentation of various types, helping in software selection, and monitoring systems once they're in place. Central to their job is the ability to use analytical skills, project management techniques, communication skills and creativity.

### Growth

Systems analyst jobs are projected to have a 0.79% growth in employment. The entry level salary for this occupation is \$74,144 with a requirement of less than 2 years of experience. The mid career salary, that is jobs requiring 3 to 5 years of experience is \$86,799. The advanced career salary which requests six or more years of experience is \$100,317.

- Project Management Certification

## Systems Analyst

*Starting Occupation*

## Database Architect

*Advancement Occupation*

### Advancement Occupation

Database architects design strategies for company-wide large databases, data warehouse systems, and multidimensional networks. They set standards for database operations, programming, query processes, and security. Database architects model, design, and construct large relational databases or data warehouses. Create and optimize data models for warehouse infrastructure and workflow. They also integrate new systems with existing warehouse structure and refine system performance and functionality. These individuals are comfortable structuring complex problems through deductive reasoning, and can communicate their recommendations in simple business-like language. But most of all, they expose significant oral and reading comprehension.

### Growth

The similarity score between database architect and the starting occupation is 0.473 and the average salary differential is \$19,051. While the projected 5-year employment growth for systems analyst is 0.79%, database architect's projected 5-year growth is higher at 2.99%. Average salary for the database architect occupation is \$69,185 for individuals with up to 2 years of experience; \$85,231 for those with 3 to

## Skills

The skills in the following table represent the additional skills likely needed to move from systems analyst to database architect. The skill taxonomy used in this analysis classifies skills for a given occupation as necessary, defining or distinguishing. Necessary skills are specialized skills required for this job and relevant across other similar jobs. The necessary skills for database architect are knowledge of data analysis, Oracle, data quality, project management, and SQL Server. Defining skills represent the day-to-day tasks and responsibilities of the job. For this occupation the defining skills include knowledge of SQL, data architecture, data warehousing, data modeling, and Extraction, Transformation and Loading (ETL). Distinguishing skills set a worker apart and come with a salary or growth premium. For this occupation, the distinguishing skills are knowledge of ERwin, database architecture, teradata, Master Data Management (MDM), and Virtualization.

## Business Intelligence Architect / Developer

*Advancement Occupation*

### Advancement Occupation

Business Intelligence Architects/ Developers are responsible for designing and developing BI solutions, overseeing the implementation of these types of systems and also their ongoing maintenance. They are in charge of developing, deploying, and maintaining BI interfaces. Those include query tools, data visualization and interactive dashboards, ad hoc reporting, and data modeling tools. These individuals are comfortable working with large amounts of data and deriving insights from their analysis. Some individuals may be more comfortable presenting and communicating results to others. But in either case, they are good at examining multiple sources of data and then making accurate conclusions about them. These individuals are naturally inquisitive and over time, develop a great deal of forward-thinking vision.

### Growth

The similarity score between business intelligence architect/ developer and the starting occupation is 0.616 and the average salary differential is \$24,362. While the projected 5-year employment growth for systems analyst is 0.79%, business intelligence architect/ developer's projected 5-year growth is considerably higher at 6.30%. CISSP is utilized to demonstrate that a security professional is able to design, engineer, implement, and run an information security program.

## Systems Analyst

*Starting Occupation*

## Software Developer / Engineer

*Advancement Occupation*

### Advancement Occupation

Software developers/ engineers design, and build computer programs. They identify user needs, develop the programs, test out new software, and make improvements. Some develop new applications for mobile or desktop use, while others build underlying systems software such as operating systems. They design each piece of an application or system and plan how the pieces will work together. Software developers / engineers create a variety of models and diagrams showing programmers the software code needed for an application. Working closely with computer programmers, software developers fill crucial roles not only in the computer systems industry, but also in manufacturing, finance, health services and software publishing industries. These individuals are comfortable with the uncertainties surrounding innovation and creativity. They have an ability to focus and concentrate for prolonged time periods addressing numerous and interlocking pieces. Finally, software developers / engineers are problem solvers, as they are responsible for solving the problems that occur during the development process.

- Project Management Certification
- IT Infrastructure Library (ITIL) Certification

The Advancement occupation commonly requests the following certifications:

- Project Management Certification
- Project Management Professional (PMP)
- Certified Scrum Master (CSM)

fication is Certified Scrum Master (CSM) The Certified Scrum Master (CSM) certification, available through the Scrum Alliance, is an entry-level certification aimed at providing professionals with an awareness of the methodologies and values of Scrum, including team performance, accountability, and iterative progress.

## Systems Analyst

*Starting Occupation*

## Network Engineer / Architect

*Advancement Occupation*

### Advancement Occupation

Network engineers / architects take care of communication networks, such as local area networks (LANs), wide area networks (WANs), and intranets. They design and implement network configurations, troubleshoot performance issues, carry out network monitoring and configure security systems such as firewalls. Among the major skills that these individuals should possess include analytical, problem-solving and communication skills. They should be team-building, detail-oriented leaders with extensive knowledge of various types of computer operating, security and wireless systems.

### Growth

The similarity score between network engineer or architect and the starting occupation is 0.535 and the average salary differential is \$20,466. While the projected 5-year employment growth for systems analyst is 0.79%, network engineer or architect's projected 5-year growth is higher at 2.86%. Average salary for the network engineer or architect occupation is \$58,383 for individuals with up to 2 years of experience; \$79,154 for those with 3 to 5 years, and \$95,250 for individuals with 6 or more years. There were 2,525 postings for the advancement occupation.

### Skills

The skills in the following table represent the additional skills likely needed to move from systems analyst to network engineer or architect. The skill taxonomy used in this analysis classifies skills for a given occupation as necessary, defining or distinguishing. Necessary skills are specialized skills required for this job and relevant across other similar jobs. The necessary skills for network engineer or architect are knowledge of Python, routers, project management, Java, and software development. Defining skills represent the day-to-day tasks and responsibilities of the job. For this occupation the defining skills include knowledge of network engineering, Cisco, Linux, Wide Area Network (WAN), and VMware. Distinguishing skills set a worker apart and come with a salary or growth premium. For this occupation, the distinguishing skills are knowledge of Microsoft Active Directory, Voice over IP (VoIP), network testing, network hardware, and Citrix.

### Certifications

The systems analyst occupation commonly requests security clearance, and among others, the following certifications: Project management certification. The Certified Associate in Project Management (CAPM) from the Project

## Systems Analysis

*Starting Occupation*

## Web Developer

*Advancement Occupation*

### Advancement Occupation

Web developers create and maintain websites. They are also responsible for the site's technical aspects, such as its performance and capacity, which are measures of a website's speed and how much traffic the site can handle. In addition, web developers may create content for the site. They evaluate code to ensure that it is properly structured, meets industry standards, and is compatible with browsers and devices. These developers optimize website performance, scalability, and server-side code and processes. They may develop website infrastructure and integrate websites with other computer applications. These individuals are comfortable working with technology as the core of their responsibilities, but overtime, must develop a good understanding of consumer behavior, as well as collaboration skills and project management.

### Growth

The similarity score between web developer and the starting occupation is 0.365 and the average salary differential is \$17,468. While the projected 5-year employment growth for systems analyst is 0.79%, web developer's projected 5-year growth is higher at 2.18%. Average salary for the web developer occupation is \$70,021 for individuals with up to 2 years of experience;
